Examine new trends in the writing of new history—and what they mean to information science! History has been devalued, causing a lack of career prospects for historians, a decrease in vocations to the history profession, and historical discontinuity between generations. History Under Debate: International Reflection on the Discipline is a recap of the crucial Second International Historia a Debate conference, held on July 17, 1999 in Santiago de Compostela. This book details the comparative critical perspectives on history, historians, their audiences, and the coming trends that will inevitably impact information science. The in-depth examination provides innovative approaches to historians as they redefine their discipline in relation to the global society of the new millennium while presenting invaluable insights for librarians, social scientists, and political scientists. History Under Debate: International Reflection on the Discipline examines how the writing of history in the twenty-first century is revitalized by international comparative historiography, thanks to new technologies and the multinational integration processes in economy, politics, culture, and academics. The first section discusses the Historia a Debate (HaD) Forum and Movement, detailing the need for change to restore history as a vital global subject in modern times. The remainder of the book consists of reflective and comparative views on the study of history and historiography as well as history in and about Spain and its relation to the rest of the world. The book explores new ways for

moving the discipline beyond sources and source criticism alone to a different concept of the historical profession as a science with a human subject that discovers the past as people construct it. Included in this book is the English translation of the HaD Manifesto—a proposal designed to unify historians of the twenty-first century and ensure a new dawn for history, its writings, and its teachings. History Under Debate: International Reflection on the Discipline includes vital discussions on: “Linguistic Turn,” Postmodernism, and Deconstruction gender studies and social history objectivity and subjectivity in historical interpretation multiple views of history from differing times and places history as criticism, literature, and reconstruction History Under Debate: International Reflection on the Discipline is an essential resource that teaches historians, librarians, social scientists, and humanists how to use cross-border development and new global historiographic networks to bring hope for a future in history.

Once Upon a Time meets Game of Thrones in New York Times bestselling author Gena Showalter's magical, romantic dark fantasy series, in which the fairy tales we know and love are prophecies of the future. Welcome to the Forest of Good and Evil, where villains may be heroes and heroes may be villains...it all depends on who you ask. In the realm of Enchantia, creatures of legend still exist, magic is the norm, and fairy tales are real. Raised in the human world, Everly Morrow has no idea she's a fairy-tale princess—until she begins to commune with mirrors. Soon, a horrifying truth is revealed. She is fated to be Snow White's greatest enemy, the Evil Queen. With powers beyond her imagination or control, Everly returns to the land of her birth. There, she meets Roth Charmaine, the supposed Prince Charming. Their attraction is undeniable, but their relationship is doomed. As Everly faces disasters and betrayals, giving in to her dark side proves more tempting. Can she resist, or will she become the villain she was born to be? Critics love The Evil Queen: “Showalter (the Everlife books) delivers an entertaining series opener that condemns prejudice while championing self-determination. Romance-sweet and steamy, gay and straight-features prominently, action and humor abound, and the mystery of how each character figures into the legend imparts intrigue.”—Publishers Weekly “The novel's conceit has a lot of potential with its deconstruction of a cherished fairy tale, an interesting take on good and evil as actions rather than fate, and a long cast of characters in ever evolving roles that will leave readers wondering who they are supposed to

be.”—Kirkus Reviews The Forest of Good and Evil Series: The Evil Queen The Glass Queen

Epigenetics and Systems Biology highlights the need for collaboration between experiments and theoretical modeling that is required for successful application of systems biology in epigenetics studies. This book breaks down the obstacles which exist between systems biology and epigenetics researchers due to information barriers and segmented research, giving real-life examples of successful combinations of systems biology and epigenetics experiments. Each section covers one type of modeling and one set of epigenetic questions on which said models have been successfully applied. In addition, the book highlights how modeling and systems biology relate to studies of RNA, DNA, and genome instability, mechanisms of DNA damage signaling and repair, and the effect of the environment on genome stability. Presents original research in a wider perspective to reveal potential for synergies between the two fields of study Provides the latest experiments in primary literature for the modeling audience Includes chapters written by experts in systems biology and epigenetics who have vast experience studying clinical applications

Since the discovery of Aquaporin-1 (AQP1) as a water channel, many studies have revealed the importance of aquaporins in mammalian physiology and pathophysiology as well as plant and microbial biology. The studies have also shown aquaporins as potential drug targets and targets for improving crop properties. Written by an international group of contributors at the forefront of the field, *Aquaporins in Health and Disease: New Molecular Targets for Drug Discovery* presents the latest research advances in aquaporins and other major intrinsic protein (MIP) channels. The first section of the book describes the general concepts of aquaporin channel function, genomic research, structure-function analysis of aquaporins and glycerol facilitators, and regulation by gating and trafficking, including yeast aquaporin regulation and function. The second section discusses the physiological and pathophysiological roles of aquaporins in humans and microbes. The final section covers the development of inhibitors of aquaporin function. The book's epilogue offers future perspectives and directions, mainly in the area of aquaporin-based diagnostics and therapeutics. Stimulating future research on this important protein family, this book facilitates a paradigm shift in the understanding and roles of aquaporin membrane proteins in all biological settings.
