The complexity of the process of translating questionnaires and the skills needed to tackle the task are commonly underestimated. Medical researchers in nonEnglish speaking countries often speak very good English themselves and mistakenly assume that they can rely on their own translation of an English questionnaire into their native language.

The Perceived Control of Diabetes Scales were originally designed in the early 1980s to be used alongside measures of health beliefs described elsewhere in this Handbook by Lewis and Bradley. The scales were included in a Sheffield based prospective study of insulin-requiring patients who were involved in a feasibility study of continuous subcutaneous insulin infusion (CSII) pumps.
