Dog inflammation is a complex biological

response of the dog's body tissues to harmful stimuli, such as pathogens, damaged cells, or irritants, and is a protective response involving immune cells, blood vessels, and molecular mediators to repair the body. Just as people may suffer from bronchitis, colitis, arthritis, tonsillitis or a range of other inflammatory (or "itis") conditions, so too can your dog. Inflammation is the body's immune response against foreign substances, injuries or infection. It can also result from autoimmune diseases, in which the body triggers an inflammatory response when there aren't any invaders to battle. Dog inflammation occurs when plasma and white blood cells are drawn to a part of the body to fight infection, take away dead cells and initiate tissue repair. Increased blood flow to the area causes the region to appear reddened and feel

warm. The blood vessels become more permeable, and leak fluid into the surrounding tissue, causing swelling. Chemicals are released into the tissue or blood to fight infection and do other jobs. But inflammation comes with a price: Increased pressure from swelling, along with the release of certain chemicals such as bradykinin and histamine, stimulate nerve endings and cause pain. Anytime you see inflammation, expect that your dog hurts. In addition, chronic inflammation and pain can predispose your dog to certain diseases, even some types of cancer. And more evidence is compiling that chronic inflammation is far more common than we once thought. Sometimes inflammation is obvious. A dog with a recent cut or burn will have inflamed tissue in the injured area; a dog with an ear infection will often have an inflamed

ear canal; a dog with periodontal disease will have inflamed gums; a dog with an allergic reaction to fleas will have inflamed skin. Sometimes the inflammation is internal and not so obvious; a dog with an inflamed prostate, pancreas or kidney may be in intense pain, but you can't see the cause. CBD oil for dogs is one of the hottest trends today because studies have shown CBD oil for dogs has exceptional therapeutic value. Cannabis plants produce both hemp and marijuana and contain more than 113 chemicals called cannabinoids; including phytocannabinoids, terpenoids, and flavonoids. The two main ones are CBD or cannabidiol and THC or tetrahydrocannabinol. While THC is the psychoactive chemical that makes you high, CBD is medicinal and non-psychoactive. To appreciate the critical difference between the two, consider that

marijuana contains 10-15 percent THC, while hemp is regulated and must contain only 0.3 percent or less THC.

Consequently, it's impossible for your dog to get high or overdose with CBD because most CBD oil on the market for pets has zero THC. Various strains of cannabis plants produce THC, and others are specifically cultivated to be high-CBD/ low-THC. Still, others are industrial hemp (*Cannabis sativa*) and have zero THC content. The latter is generally used for CBD products for pets. Bottom line, CBD oil for dogs is extracted from hemp, not marijuana. Ongoing, in-depth research and studies have concluded that CBD oil is safe to administer to your dog. Inflammation has traditionally been a tricky nail to hammer for researchers when it comes to finding a therapeutic solution. The most promising area of

study has involved the endocannabinoid system, namely CB1 and CB2 receptor activation which are G-protein-coupled receptor sites and the ligands that activate them. Cannabidiol has a distinct way of interacting with the endocannabinoid system that appears very promising for therapeutic applications with relation to inflammation.¹ This book will serve as an easy-to-read synopsis of much of the research in this area regarding inflammation correlated with arthritis, Type 2 and diabetes, atherosclerosis, Alzheimer's, hypertension, metabolic syndrome, depression, and neuropathy. Therapeutic Uses of Cannabis J.D.

Rockefeller

Prior to the outlawing of cannabis in 1937, major pharmaceutical companies produced a wide variety of cannabis-based medicines, but cannabis has actually been used as a medicine for thousands of years. Although it has a long

history, the recent discovery (1992) of the body's widespread endocannabinoid system (ECS) has thrust cannabis back into the limelight again as a viable medicine. In 2012 over 2.5 million prescriptions were written for medical marijuana in the United States. CBD and THC are both cannabinoids found in cannabis. However, while THC produces a “ high ” in the user, CBD does not. And now legal CBD-rich hemp oil is available over-the-counter in all 50 states, without a prescription. It was discovered that the Hemp Family of plants (cannabis, marijuana) is loaded with cannabinoids that stimulate our ECS receptor sites. These sites are found in the brain, organs, glands, connective tissue and immune cells and plays regulatory roles in many physiological processes including appetite,

pain-sensation, mood and memory. The primary purpose of this system revolves around maintaining balance in the body. Cannabinoids found in all varieties of cannabis work in harmony with the cannabinoids we naturally produce when our system is functioning properly. It is now coming to light that we may very well be “ Endocannabinoid Deficient ” and supplementing with Cannabidiol, known as CBD, may provide just what we're missing to restore optimum health. The health benefits of cannabidiol (CBD) from natural hemp oil is this book's primary focus. It explores the similarities, differences, uses and benefits of hemp, cannabis and medical marijuana along with the interplay of THC and CBD. Their 480 other components are also discussed, such

as terpenoids, flavonoids, enzymes, vitamins, etc. Make no mistake about it, the endocannabinoid system, although newly discovered, is just as important as any other bodily system, like the muscular, cardiac, circulatory or digestive system. The ECS requires its own specialized medicine as found in the Hemp Family of plants, which is also known as cannabis, and which includes all strains of marijuana. Here is a list of conditions known and/or being researched that may be helped by cannabinoid therapeutics and supplementation: Acne ADD/ADHD Addiction AIDS ALS (Lou Gehrig's Disease) Alzheimer's Anorexia Antibiotic Resistance Anxiety Atherosclerosis Arthritis Asthma Autism Bipolar Cancer Colitis/Crohn's Depression Diabetes

Significant changes have taken place in the policy landscape surrounding cannabis legalization, production, and use. During the past 20 years, 25 states and the District of Columbia have legalized cannabis and/or cannabidiol (a component of cannabis) for medical conditions or retail sales at

the state level and 4 states have legalized both the medical and recreational use of cannabis. These landmark changes in policy have impacted cannabis use patterns and perceived levels of risk. However, despite this changing landscape, evidence regarding the short- and long-term health effects of cannabis use remains elusive. While a myriad of studies have examined cannabis use in all its various forms, often these research conclusions are not appropriately synthesized, translated for, or communicated to policy makers, health care providers, state health officials, or other stakeholders who have been charged with influencing and enacting policies, procedures, and laws related to cannabis use. Unlike other controlled substances such as alcohol or tobacco, no accepted standards for safe use or appropriate dose are available to help guide individuals as they make choices regarding the

issues of if, when, where, and how to use cannabis safely and, in regard to therapeutic uses, effectively. Shifting public sentiment, conflicting and impeded scientific research, and legislative battles have fueled the debate about what, if any, harms or benefits can be attributed to the use of cannabis or its derivatives, and this lack of aggregated knowledge has broad public health implications. The *Health Effects of Cannabis and Cannabinoids* provides a comprehensive review of scientific evidence related to the health effects and potential therapeutic benefits of cannabis. This report provides a research agenda â€"outlining gaps in current knowledge and opportunities for providing additional insight into these issues â€"that summarizes and prioritizes pressing research needs. *CBD Oil for Pets* Independently Published For more than 25 years, the renowned Amen

The health benefits of marijuana are now getting a good deal of attention. Yet hemp—a close relative of marijuana—is actually a far richer source of CBD, the compound responsible for effectively treating dozens of disorders, and contains very little THC, the substance responsible for marijuana's highs. Sounds like growing and using hemp is a win-win situation, right? Not quite, because the US government, which holds the patent for CBD specifically because of its healing abilities, has unfairly classified hemp as a Class 1 drug, thereby banning people in the United States from growing it commercially. If you find this confusing, you're not alone. That's why best-selling author Earl Mindell has written *Healing with Hemp CBD Oil*, a straightforward book that will first help you

understand what's going on with hemp oil in the United States, and then teach you how to use this valuable natural remedy to improve your health. The book begins by looking at the important role the hemp plant has played in both Eastern and Western societies as a source for paper, textiles, rope, and so much more. This is followed by a discussion of the science behind CBD's medical benefits. The author then provides a consumer's guide to buying hemp products—especially its oil and its CBD supplements—and offers an eye-opening examination of hemp's legal status in the United States, from the 1900s to now. Finally, based on up-to-date studies, Dr. Mindell presents an A-to-Z guide to the many uses of hemp oil and CBD for various health conditions, from arthritis to depression to

heart disease. Although the United States has given CBD-rich hemp a problematic legal status, fortunately, this product—sourced from other countries—is readily available. Healing with Hemp CBD Oil guides you in using this all-natural substance as a safe, side effect-free remedy.

Foreword by Kevin A. Sabet This is the poignant life-and-death story of Johnny Stack, whose young and vibrant life ended by suicide after his descent into addiction to high-potency marijuana and cannabis-induced psychosis. You'll laugh and cry with his mother, Laura Stack, as she

retells the story of Johnny's joyful childhood and then takes you through the unthinkable tragedy of his loss. It's every parent's nightmare. But this book is much more than Johnny's story. Today Laura, who is a nationally recognized speaker and best-selling author, leads a national effort of parents, impacted family members, healthcare professionals, coalitions, teachers, and youth who are concerned about the harmful effects of marijuana on our children, teenagers, and emerging adults. This book is a clarion call for parents across America to educate themselves about the risks of today's high-THC marijuana products and to better understand the potentially devastating effects on youth mental health. Laura's real-life story is backed by recent scientific-based research on how today's potent THC products lead to mental illnesses in adolescents, such as anxiety, depression, paranoia, psychosis, and

sadly, suicidal ideation. This book is her vision to dramatically decrease adolescent marijuana usage, the false perception of safety, mental illness, and suicide, to allow our youth to live productive, happy lives.

Cannabidiol, also called CBD essential oil, is one of the active substances in cannabis. Cannabis has over 100 energetic compounds, like the significant energetic compound tetrahydrocannabinol, also known as THC. CBD is quite different from THC because it generally does not have any psychoactive results; it won't supply the consumer a state of being out of control (high) after usage; instead, it is mainly used because of its health and curing properties. CBD essential oil is a highly concentrated form of the CBD substance within Hemp and can be used for therapeutic purposes. It is also known as "tincture." It is made by moving a solvent (like essential olive oil or alcoholic beverages) to a hemp herb; this solvent

makes its way through the plant, absorbing the cannabinoids in the plant. This creates a natural, non-toxic, and safe medication for your domestic pets.....
