“ You will not sleep until you are finished with AGENT ZERO. The author did a superb job creating a set of characters who are fully developed and very much enjoyable. The description of the action scenes transport us into a reality that is almost like sitting in a movie theater with surround sound and 3D (it would make an incredible Hollywood movie). I can hardly wait for the sequel. ” --Roberto Mattos, Books and Movie Reviews In this much-anticipated debut of an epic spy thriller series by #1 bestseller Jack Mars, readers are presumed-CIA operative Kent Steele, hunted by terrorists, by the CIA, and by his own identity, must solve the mystery of who is after him, of the terrorists ’ pending target—and of the beautiful woman he keeps seeing in his mind. Kent Steele, 38, a brilliant professor of European History at Columbia University, lives a quiet life in a New York suburb with his two teenage daughters. All that changes when late one night he gets a knock on his door and is abducted by three terrorists—and finds himself flown across the ocean to be interrogated in a basement in Paris. They are convinced that Kent is the most lethal spy the CIA has ever known. He is convinced they have the wrong man. Do they? With a conspiracy around him,

adversaries as smart as he is, and an assassin on his tail, the wild game of cat and mouse leads Kent on a perilous road—one that may lead back to Langley—and to a shocking discovery of his own identity. AGENT ZERO is an espionage thriller that will keep you turning pages late into the night. Absolute Zero Wipf and Stock Publishers Sex, murder, cover-up...a lethal combination. Fourteen days until Sierra Hunt's brother is sentenced to life in prison for a crime he didn't commit and the cover-up is so outrageous it's almost unbelievable. Sierra had no way of knowing that the man with whom she had an explosive one-night stand would hold the answer to her desperate need. Vic 'Eagle' Bodine wanted more than the unexpected one night with the woman who rocked his world. He was shocked when she turned out to be Galaxy's newest client, and that they'd be joined at the hip as they worked to save her brother from an unjust imprisonment. Galaxy will need to live up to its motto of We are your last resort for this one, the mother of all cover-ups. But Eagle is going to make damned sure that he gets it done...and at the same

time convince Sierra that they belong together.

Ending the fossil fuel industry is the only credible path for climate policy. Around the world, countries and companies are setting net-zero carbon emissions targets. But what will it mean if those targets are achieved? One possibility is that fossil fuel companies will continue to produce billions of tons of

atmospheric CO₂ while relying on a symbiotic industry to scrub the air clean. Focusing on emissions draws our attention away from the real problem: the point of production. The fossil fuel industry must come to an end but will not depart willingly; governments must intervene. By embracing a politics of rural-urban coalitions and platform governance, climate advocates can build the political power needed to nationalize the fossil fuel industry and use its resources to draw carbon out of the atmosphere.
A Wrinkle in Time Universe
Thermodynamics is not the oldest of sciences. Mechanics can make that claim. Thermodynamics is a product of some of the greatest scientific minds of the 19th and 20th centuries. But it is sufficiently established that most authors of new textbooks

in thermodynamics find it necessary to justify their writing of yet another textbook. I find this an unnecessary exercise because of the centrality of thermodynamics as a science in physics, chemistry, biology, and medicine. I do acknowledge, however, that instruction in thermodynamics often leaves the student in a confused state. My attempt in this book is to present thermodynamics in as simple and as unified a form as possible. As teachers we identify the failures of our own teachers and attempt to correct them. Although I personally acknowledge with a deep gratitude the appreciation for thermodynamics that I found as an undergraduate, I also realize that my teachers did not convey to me the sweeping grandeur of thermodynamics.

Specifically the simplicity and other players. - Michael the power that James Clerk Maxwell found in the methods of Gibbs were not part of my undergraduate experience. Unfortunately some modern authors also seem to miss this central theme, choosing instead to introduce the thermodynamic potentials as only useful functions at various points in the development.

The former champion has returned to the game to find the Mentors - systems of artificial intelligence that bestow digital immortality on humans. But do they truly work for the benefit of mankind? To learn the truth and reach the Mentors who inhabit places undiscovered, the hero must begin from level zero.

Absolute Zero Cool Jack Mars Zero, zip, nada, zilch. It's all too easy to ignore the fascinating possibilities of emptiness and non-existence, and we may well wonder what there is to say about nothing. But scientists have known for centuries that nothing is the key to understanding absolutely everything, from why particles have mass to the expansion of

the universe; without nothing we'd be precisely nowhere. With chapters by 22 science writers, including top names such as Ian Stewart, Marcus Chown, Helen Pilcher, Nigel Henbest, Michael Brooks, Linda Geddes, Paul Davies, Jo Marchant and David Fisher, this fascinating and intriguing book revels in a subject that has tantalised the finest minds for centuries, and shows there's more to nothing than meets the eye.

Fireflies at Absolute Zero is a map of a life, written in location and longing, its calligraphy the surreal moments between dream and waking. The poems are shaped by myth, the Gaelic poetic tradition, dream worlds, personal history, and the grey-green landscape of the Salish Sea. From snowfall in the Hoh rainforest to the

sensuality of a lover's touch, the poems span decades of a life in motion, finally finding a home between the mountains and waters of the Pacific Northwest.

Radioastronomy has painted an extraordinary picture of the Galactic interstellar medium, which displays an amazing organization and structuring of matter from very hot ultra-diluted media to very cold denser milieus considered as the cradles of stars. In these latter environments, the discovery of a chemical diversity of molecules, including those associated with precursors to life itself, immediately brought to light the question of the mechanisms leading to their formation and persistence at temperatures as low as 10 K. The chemical networks developed to understand

telescope observations required a great deal of physical and chemical parameters relevant to interstellar conditions, particularly at very low temperatures. These included the rate coefficients of thousands of gas phase chemical reactions. Such data were missing in the 1970s, when the very first molecular discoveries were made. Then, in the early eighties, it was realized that uniform supersonic flows were ideal chemical reactors to study reaction kinetics at interstellar temperatures. Uniform Supersonic Flows in Chemical Physics reviews 40 years of use of such reactors, the so-called CRESU machines, focusing on major breakthroughs brought to chemical physics, physical chemistry, astrophysics and

astrochemistry by the various experiments carried out with such apparatuses. The wealth of kinetic data at very low temperatures provided new targets for the predictions of theory, with new theoretical methods being developed to explain observed behavior. The first two chapters describe the physical context of reaction kinetics at very low temperatures and the requirements needed to run optimally such uniform supersonic flows, together with a historical perspective. Chapters 3 to 9 describe the various families of chemical processes that have been explored within the CRESU technique, highlighting major advances and offering an exhaustive up-to-date bibliography. Chapters 10 and 11 show how these experimental results have

helped in improving the ideas in quantum chemistry and interstellar modeling. The book concludes with an overview of potential perspectives and new routes to be explored.

Introducing the crew of the Harpy: a ragtag group of spacers hauling cargo in the outer rim. Until someone tries to blow them out of the Black. Alcohol, women, and space, that's what keeps Captain Kael Jameson going. Plus the crew he's managed to gather in place of a family. But when he's forced to destroy something precious in order to save the ones he loves most, his world is turned upside down in a heartbeat. Things get bad after that, and he already had a hangover. Alien hitmen, political intrigue leading to civil war, and a cunning pirate overlord; you'd think it couldn't get any worse. But it does. When an unidentified enemy enters the known systems and starts picking New Earth's allies off, one by

one, life as we know it falls apart. Either Kael and his crew beat them. Or get beaten. It's going to be a close call.

surveys the disparate answers to this question offered by artists, film-makers, writers and theorists over the past few decades. It zones in on the crises of representation that have accompanied the enduring crisis of capitalism, foregrounding the production of new visions and artefacts that wrestle with the vastness, invisibility and complexity of the abstractions that rule our lives.
