Plunkett's Infotech Industry Almanac 2006 Harvard Business Press It is the fundamental challenge of the high-tech sector: A firm must innovate internally to succeed-yet its success may equally depend on corresponding innovations by external firms. Whether a company develops a ubiquitous operating system or the software that runs on it, a VCR or the movies we play on it, every participant in a high-tech network is vulnerable to the innovative moves of its partners and competitors. Yet, in spite of this perilous situation, some firms have developed strategies that have made them industry powerhouses and world-class innovators. How? By becoming platform leaders -companies that provide the technological foundation on which other products, services, and systems are built. Platform leadership is the Holy Grail of high-tech industries, but it is difficult to achieve. In Platform Leadership , high-tech strategy experts Annabelle Gawer and Michael A. Cusumano reveal how Intel, Microsoft, and Cisco, as well as companies including Palm and NTT DoCoMo, have orchestrated industry innovations to support their products-and, in the process, established dominant market positions. Based on these in-depth case studies and on incisive analysis, the authors present their Four Levers Framework for designing and implementing a successful platform strategy- or for improving an existing strategy: 1. Determine the scope of the firm : Is it preferable to create product complements internally or let the "market" produce them? 2. Design product technology strategically : What degree of modularity is appropriate? Should product interfaces be open or closed? What information should leaders disclose to outside firms? 3. Shape relationships with external complementors : How can the company balance competition and collaboration with outside players? 4. Optimize internal organizational structures : What processes and systems will allow the company to manage internal and external conflicts of interest most

effectively? For executives, strategists, and entrepreneurs in many high-tech arenas, this book shows how firms can orchestrate innovation to ensure their own competitive futures-and drive the evolution of their industry. AUTHORBIO: Annabelle Gawer is Assistant Professor of Strategy and Management at INSEAD. Michael A. Cusumano is the Sloan Management Review Professor of Management at the MIT Sloan School, editor-in-chief and chairman of the board of the Sloan Management Review , and coauthor of the bestseller Microsoft Secrets .

Schools remain notorious for co-opting digital technologies to «business as usual» approaches to teaching new literacies. DIY Media addresses this issue head-on, and describes expansive and creative practices of digital literacy that are increasingly influential and popular in contexts beyond the school, and whose educational potential is not yet being tapped to any significant degree in classrooms. This book is very much concerned with engaging students in do-it-yourself digitally mediated meaning-making practices. As such, it is organized around three broad areas of digital media: moving media, still media, and audio media. Specific DIY media practices addressed in the chapters include machinima, anime music videos, digital photography, podcasting, and music remixing. Each chapter opens with an overview of a specific DIY media practice, includes a practical how-to tutorial section, and closes with suggested applications for classroom settings. This collection will appeal not only to educators, but to anyone invested in better understanding - and perhaps participating in - the significant shift towards everyday people producing their own digital media.

This book investigates how broadband internet can be provided to remote and isolated communities through the use of satellite and other enabling technologies, in the form of a self-contained broadband apparatus. It discusses how the proposed design can help bridge the digital divide by removing one of the main hurdles to adopting technologies: infrastructure. In turn, the book explores how the lack of infrastructure, especially with regard to connectivity and electricity, can be addressed by exploiting new technological advances in a number of fields, notably the newly proposed large broadband satellite constellations. In closing, it uses concrete examples to demonstrate the potential positive impacts of a "broadband ecosystem" on economics, governance and society, and on achieving the United Nations' Sustainable Development Goals.
