The Renaissance of Etching is a groundbreaking study of the origins of the etched print. Initially used as a method for decorating armor, etching was reimagined as a printmaking technique at the end of the fifteenth century in Germany and spread rapidly across Europe. Unlike engraving and woodcut, which required great skill and years of training, the comparative ease of etching allowed a wide variety of artists to exploit the expanding market for prints. The early pioneers of the medium include some of the greatest artists of the Renaissance, such as Albrecht Dürer, Parmigianino, and Pieter Bruegel the Elder, who paved the way for future printmakers like Rembrandt, Goya, and many others in their wake. Remarkably, contemporary artists still use etching in much the same way as their predecessors did five hundred years ago. Richly illustrated and including a wealth of new information, The Renaissance of Etching explores how artists in Germany, the Netherlands, Italy, and France developed the new medium of etching, and how it became one of the most versatile and enduring forms of printmaking. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 14.0px Verdana}

When a glamorous literary agent falls prey to a violent stalker, she discovers that the publishing biz can really be murder, for fans of The Spellman Files and Maisie Dobbs " Suspenseful . . . Barbara Rogan cleverly explores . . . our capacity for self-deception and weaves it into an absorbing mystery that keeps its secret until the very end. " —NPR Jo Donovan always manages to come out on top. Originally from the backwoods of Appalachia, she forged a hard path to elegant lunches and parties among New York City ' s literati. At thirty-five, she ' s the widow of the renowned novelist (and notorious playboy) Hugo Donovan, the owner of one of the best literary agencies in town, and is one of the most sought-after agents in the business. But all this is about to fall apart, as a would-be client turns stalker, a hack shops around a proposal for an unauthorized tell-all biography of Hugo, and a handsome old flame shows up without warning. Both a seasoned author and a former literary agent herself, Barbara Rogan knows the publishing world from all angles. Fans of Lisa Lutz and Jaqueline Winspear will adore Jo Donovan and Rogan ' s wickedly sharp tale that skewers the dangerous fictions we read—and the dangerous fictions we tell ourselves.

Published to celebrate The Metropolitan Museum of Art's 150th anniversary, Making The Met, 1870–2020 examines the institution's evolution from an idea—that art can inspire anyone who has access to it—to one of the most beloved global collections in the world. Focusing on key transformational moments, this richly illustrated book provides insight into the visionary figures and events that led The Met in new directions. Among the many topics explored are the impact of momentous acquisitions, the central importance of education and accessibility, the collaboration that resulted from international excavations, the Museum's role in preserving cultural heritage, and its interaction with contemporary art and artists. Complementing this fascinating history are more than two hundred works that changed the very way we look at art, as well as rarely seen archival and behind-the-scenes images. In the final chapter, Met Director Max Hollein offers a meditation on evolving approaches to collecting art from around the world, strategies for reaching new and diverse audiences, and the role of museums today.

Remarkable achievements in parasitic disease research, both basic and translational, have occurred over the last ten years, and we have incorporated the majority of these into the 6th edition of Parasitic Diseases. We have added over 1,000 new references to document these advances. Innovative work in the laboratory has provided the clinician/research scientist with a much clearer understanding of the mechanisms of pathogenesis. The number of recently discovered interleukins and their cellular networks has completely re-ordered our comprehension of how parasites and our defense system works to produce protection against infection/reinfection, or in some cases, how it becomes subverted by the offending pathogen to enable it to endure inside us for long periods of time. A plethora of molecular-based diagnostic tests have found their way into the routine of the parasitology diagnostic laboratory, improving the ease at which the offending pathogen can be rapidly identified. Newer drugs, many with less harmful side-effects than the ones they replaced, have come on the market that make controlling parasite populations at the community level possible without the risk of harming the very ones we wish to help.

In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

Featuring more than 150 treasures from several of the world's most prestigious collections, Making Marvels explores the vital intersection of art, technology, and political power at the courts of early modern Europe. It was there, from the sixteenth through eighteenth centuries, that a remarkable outpouring of creativity and learning gave rise to exquisite objects that were at once beautiful works of art and technological wonders. By amassing vast, glittering collections of these ingeniously crafted objects, princes flaunted their wealth and competed for mastery over the known world. More than mere status symbols, however, many of these marvels ushered in significant advancements that have had a lasting influence on astronomy, engineering, and even international politics. Incisive texts by leading scholars situate these works within the rich, complex symbolism of life at court, where science and splendor were pursued with equal vigor and together contributed to a culture of magnificence.

Surrealism was a broad movement, which attracted many adherents. It was organized and quite strictly disciplined, at least until the death of its leader, André Breton, in 1966. As a consequence, its membership was in a constant state of flux: persons were constantly being admitted and excluded, and often the latter continued to regard themselves as Surrealists. The wide-ranging nature of the Surrealist movement was spread over many countries and many different art forms, including painting, sculpture, cinema, photography, music, theater, and literature, most notably poetry. The Historical Dictionary of Surrealism relates the history of this movement through a chronology, an introductory essay, a bibliography, and over 600 cross-referenced dictionary entries on persons, circles, and groups who participated in the movement; a global entry on some of the journals and reviews they produced; and a sampling of major works of art, cinema, and literature.

Adolf Loos held that a building should have a soberly discreet exterior, reserving all its riches for its interior. Given that, any real appreciation of the spatial complexity of the work of one of the most misunderstood architects of the twentieth century requires engagement with his interiors, which this book does, brilliantly. In marked contrast to his contemporaries in the Vienna Secession, who designed their spaces down to the smallest detail, Loos presented himself as a "professor of interior design," perfectly willing to adapt to the habits and tastes of his clients, inviting them to embrace their own tastelessness rather than defer to the discernment of an "aesthete" architect. Together with the future occupant, he designed welcoming interiors whose warmth came from the effective use of quality materials and the creation of a flowing continuity articulated by the furnishings. What Loos created thereby was not merely architecture, but a new culture of living.

Fluoropolymers continue to enable new materials and technologies as a result of their remarkable properties. This book reviews fluoropolymer platforms of established commercial interest, as well as recently discovered methods for the preparation and processing of new fluorinated materials. It covers the research and development of fluoropolymer synthesis, characterization, and processing. Emphasis is placed on emerging technologies in optics, space exploration, fuel cells, microelectronics, gas separation membranes, biomedical instrumentation, and much more. In addition, the book covers the current environmental concerns associated with fluoropolymers, as well as relevant regulations and potential growth opportunities. Concepts, studies, and new discoveries are taken from leading international laboratories, including academia, government, and industrial institutions.

As one of the finest holdings of Indian art in the West, the Kronos Collections are particularly distinguished for paintings made between the sixteenth and early nineteenth centuries for the Indian royal courts in Rajasthan and the Punjab Hills. These outstanding works, many of which are published and illustrated here for the first time, are characterized by their brilliant colors and vivid, powerful depictions of scenes from Hindu epics, mystical legends, and courtly life. They also present a new way of seeking the divine through a form of personal devotion—known as bhakti—that had permeated India's Hindu community. While explaining the gods, demons, lovers, fantastical creatures, and mystical symbols that are central to literature and worship, this publication celebrates the diverse styles and traditions of Indian painting. Divine Pleasures features an informative entry for each work and two essays by scholar Terence McNerney that together outline the history of Indian painting and the Rajput courts, providing fresh insights and interpretations. Also included are a personal essay by expert and collector Steven M. Kossak and an examination of Hindu epic and myth in Mughal painting, which lays important foundations for Rajput painting, by curator Navina Najat Haidar. Through their research and observations, the authors deepen our understanding and underscore the significance of Indian painting. Divine Pleasures presents a nuanced view of a way of life intimately tied to the seasons, the arts, and the divine.
