Numerical
optimization is
introduced as the
mathematical
foundation for this
book, focusing on
two basic

unconstrained optimization algorithms: line search and trust-region methods. Line search optimization methods are relatively simple and commonly used gradient descent based methods.

Numerical Optimization (Springer Series in Operations ...

Every year optimization algorithms are being called on to handle problems that are much larger and

complex than in the past. Accordingly, the book emphasizes large-scale optimization techniques, such as interior-point methods, inexact Newton methods, limited-memory methods, and the role of partially separable functions and automatic differentiation.
