This is an update of two previously published books on this subject, which are both included in this volume. As the last remaining member of, and press officer for, the Federal Aviation Administration's anti-skyjacking task force that developed the original procedure during 1969-70, the author has unique personal experience. The general theme is that the government is going around in procedural circles to provide "security" when a return to the original Dailey Profile as Step One would provide the same, if not better, protection against potential skyjacking. The book also defines the difference between domestic events and perceived terrorism.

The Rough Guide to Central America On A Budget Rowman & Littlefield

"Since 2009, the Transportation Security Administration's (TSA) Secure Flight program has changed from a program that identifies passengers as high risk solely by matching them against the No Fly List, composed of individuals who should be precluded from boarding an aircraft, and the Selected List, composed of individuals who should receive enhanced screening at the airport security checkpoint, to one that assigns passengers a risk category: high risk, low risk, or unknown risk. Secure Flight has established program goals that reflect these new program functions; however, current program performance measures do not allow Secure Flight to fully assess its progress toward achieving all of its goals. Furthermore, TSA lacks timely and reliable information on all known cases of Secure Flight system matching errors. TSA has processes in place to implement Secure Flight screening determinations at airport checkpoints, but could take steps to enhance these processes. TSA information from May 2012 through February 2014 indicates that screening personnel have made errors in implementing Secure Flight determinations at the checkpoint. However, TSA does not have a process for systematically evaluating the root causes of these screening errors. Evaluating the root causes of screening errors, and then implementing corrective measures, in accordance with federal internal control standards, to address those causes could allow TSA to strengthen security screening at airports. The Department of Homeland Security Traveler Redress Inquiry Program (DHS TRIP) affords passengers who may have been incorrectly matched to or listed on high-risk lists based on the Terrorist Screening Database (TSDB)--the U.S. government's consolidated list of known and suspected terrorists--an opportunity to seek redress. Passengers who, through the redress process, are determined to have been misidentified to a TSDB-based high-risk list are added to the TSA Cleared List, which allows them to be cleared (not identified as high risk) nearly 100 percent of time. In fiscal year 2013, DHS TRIP began working to reduce processing time for its redress and appeals cases. Specifically, DHS has reduced its target for average number of days for redress cases to be closed and has established a performance goal for the appeals process. DHS TRIP plans to periodically review its progress in achieving its appeals performance goal and determine by February 2015 whether further changes to the appeals process are warranted. TSA has taken steps to implement several of the privacy oversight mechanisms it planned to establish when Secure Flight implementation began in 2009, but additional actions could allow TSA to sustain and strengthen its efforts. TSA has implemented privacy training for new Secure Flight staff, and all DHS employees receive annual privacy training. However, existing Secure Flight staff do not receive job-specific privacy refresher training consistent with Office of Management and Budget (OMB) requirements. Providing job-specific privacy refresher training could further strengthen Secure Flight's protection of personally identifiable information. TSA also documents some aspects of its Secure Flight privacy oversight mechanisms, such as scheduled destructions of passenger data. However, TSA does not have a mechanism to comprehensively document and track key privacy-related issues and decisions that arise through the development and use of Secure Flight. In GAO's September 2014 reports, GAO recommended that TSA develop measures to address all aspects of performance related to Secure Flight program goals, develop a mechanism to systematically document the number and causes of Secure Flight system matching errors, develop a process to regularly evaluate the root causes of screening errors at security checkpoints and implement measures to address these causes, provide job-specific privacy refresher training for Secure Flight staff, and develop a mechanism to document and track key Secure Flight privacy issues and decisions. DHS concurred with GAO's recommendations."--Highlights.

Incidents of airport workers using access privileges to smuggle weapons through secured airport areas and onto planes have heightened concerns regarding commercial airport security. The Transportation Security Admin. (TSA), along with airports, is responsible for security at TSA-regulated airports. To guide risk assessment and protection of critical infrastructure, including airports, the Nat. Infrastructure Protection Plan (NIPP) was developed. This report examined the extent to which, for airport perimeters and access controls, TSA: (1) assessed risk consistent with the NIPP; (2) implemented protective programs, and evaluated its worker screening pilots; and (3) established a strategy to guide decision making. Focusing on the ways that airports have become securitized, the essays address a wide range of practices and technologies--from architecture, biometric identification, and CCTV systems to "no-fly lists" and the privatization of border control--now being deployed to frame the social sorting of safe and potentially dangerous travelers.

Because of 9/11, there is universal recognition that aviation security is a deadly serious business. Still, around the world today, the practice of aviation security is rooted in a hodgepodge of governmental rules, industry traditions, and local idiosyncrasies. In fact, nearly seven years after the largest single attack involving the air transport industry, there remains no viable framework in place to lift aviation security practice out of the mishmash that currently exists. It is the ambitious intent of Aviation Security Management to change that. The goals of this set are nothing less than to make flying safer, to make transporting goods by air safer, and to lay the foundation for the professionalization of this most important field. This dynamic set showcases the most current trends, issues, ideas, and practices in aviation security management, especially as the field evolves in the context of globalization and advances in technology. Written by leading academic thinkers, practitioners, and former and current regulators in the field, the three volumes highlight emerging and innovative practices, illustrated with examples from around the world. Volume 1 takes a penetrating look at the overall framework in which aviation security management has taken place in the past and will likely do so in the foreseeable future. It covers the major areas of focus for anyone in the aviation security business, and it provides a basis for educational programs. Volume 2 delves into the emerging issues affecting aviation security managers right now. Volume 3: Perspectives on Aviation Security Management covers the full spectrum of international aviation security-related issues. It will serve as part of the foundation for the next generation of research in the area in both a business and cultural context. Collectively, these volumes represent the state of the art in the field today and constitute an essential resource for anyone practicing, studying, teaching, or researching aviation security management.

Aviation Security and Anti-terrorism Efforts Plunkett Research, Ltd.

Insurgencies are like the hydra, the many-headed beast of Greek mythology. Once one begins, the measures a government takes to eliminate militants ù to cut off the insurgency's head ù can provoke countless others to join the enemy ranks. Tactical victories often breed strategic de¼ feats. Traditional ô search, destroy, and withdraw ö missions that rely on firepower to wipe out reb¼els frequently destroy the livelihoods and loved ones of innocent people caught in the cross fire. U.S. troops have seen the pattern repeated as their initially successful offensives toppled en¼emy regimes in Afghanistan and Iraq, but soon transformed into grueling guerrilla wars. Hearts, Minds, and Hydras outlines the reasons for these worsening situations. The most cru¼cial were self-defeating decisions made by the George W. Bush administration, whose neocon¼servatism and hubris rather than careful analy¼sis of genuine threats, national interests, and reasonable options shaped its policies. Although the Americans were eventually able to contain and diminish the insurgency in Iraq, the one in Afghanistan not only steadily intensified but also spread into neighboring Pakistan. The near abandonment of the war in Afghanistan and the neoconservative campaign in Iraq were godsend for al Qaeda and all other enemies of the United States. Then, as America's position deteriorated in both wars, the neoconservatives became even more determined to stay the course. William Nester analyzes some of the more prom¼inent dilemmas haunting American policymak¼ers now struggling to win in Afghanistan, fight terrorism in the United States, and reshape their relationship with Pakistan. In doing so, he reveals the nature of that all-too-real monster of insur¼gency, what feeds it, and how to starve it.
