"To what extent can science and vigilance prevent or mitigate negative outcomes?" and "What obligation do some segments of local, national, and global populations have to help other segments manage risks?", shedding light on the issues in the quest for definitive answers. The Handbook offers a broad approach to the study of risk and crisis as joint concerns. Chapters explore the reach of crisis and risk communication, define and examine key constructs, and parse the contexts of these vital areas. Brealey, Principles of Corporate Finance 13e describes the theory and practice of corporate finance. We hardly need to explain why financial managers must master the practical aspects of their job, but we should spell out why down-to-earth managers need to bother with theory. Throughout this edition, the authors demonstrate how managers use financial theory to solve practical problems. They also explore what financial managers should do to increase company value. Some of the biggest changes in this edition were prompted by the tax changes enacted in the U.S. Tax Cuts and Jobs Act passed in December 2017.

What is good government? Why do some governments fail? How do you implement political accountability in practice? What incentives do you need to put in place to ensure that politicians and public servants act in the public interest and not their own? These questions and many more are addressed in Timothy Besley's intriguing Lindahl lectures. Economic analyses of government usually divide into two broad camps. One which emphasizes government as a force for public good that can regulate markets,

distribute resources and generally work towards improving the lives of its citizens. The other sees government as driven by private interests, susceptible to those with the power to influence its decisions and failing to incentivize its officials to act for the greater public good. This book adopts a middle way between the two extremes, the Publius approach, which recognizes the potential for government to act for the public good but also accepts the fact that things often go wrong. It shares the view that there are certain institutional preconditions for effective government but then proceed to examine exactly what those preconditions are. Timothy Besley emphasises that it is not just about designing an appropriate institutional framework but also about understanding the way incentives work and the process by which the political class is selected.

Should we pay children to read books or to get good grades? Should we allow corporations to pay for the right to pollute the atmosphere? Is it ethical to pay people to test risky new drugs or to donate their organs? What about hiring mercenaries to fight our wars? Auctioning admission to elite universities? Selling citizenship to immigrants willing to pay? In *What Money Can't Buy*, Michael J. Sandel takes on one of the biggest ethical questions of our time: Is there something wrong with a world in which everything is for sale? If so, how can we prevent market values from reaching into spheres of life where they don't belong? What are the moral limits of markets? In recent decades, market values have crowded out nonmarket norms in almost every aspect of life—medicine, education, government, law, art, sports, even family life and personal relations. Without quite realizing it, Sandel argues, we have drifted from having a market economy to being a market society. Is this where we want to be? In his New York Times bestseller *Justice*, Sandel showed himself to be a master at illuminating, with clarity and verve, the hard moral questions we confront in our everyday lives. Now, in *What Money Can't Buy*, he provokes an essential discussion that we, in our market-driven age, need to have: What is the proper role of markets in a democratic society—and how can we protect the moral and civic goods that markets don't honor and that money can't buy?

Corporate Finance: a South African Perspective

Science and technology are embedded in virtually every aspect of modern life. As a result, people face an increasing need to integrate information from science with their personal values and other considerations as they make important life decisions about medical care, the safety of foods, what to do about climate change, and many other issues. Communicating science effectively, however, is a complex task and an acquired skill. Moreover, the approaches to communicating science that will be most effective for specific audiences and circumstances are not obvious. Fortunately, there is an expanding science base from diverse disciplines that can support science communicators in making these determinations. *Communicating Science Effectively* offers a research agenda for science communicators and researchers seeking to apply this research and fill gaps in knowledge about how to communicate effectively about science, focusing in particular on issues that are contentious in the public sphere. To inform this research agenda, this publication identifies important influences

psychological, economic, political, social, cultural, and media-related " on how science related to such issues is understood, perceived, and used. **The New Entrepreneurial Leader** Oxford University Press

In years past, the keywords for leaders were confidence, single-minded purpose, and strategic planning. But today ' s vastly complex, globalized, and fast-evolving world requires a different kind of leadership. This game-changing book details a new approach—entrepreneurial leadership—developed at Babson College, the number-one school for entrepreneurship in the world. Entrepreneurial leadership is inspired by, but is separate from, entrepreneurship. It can be applied in any organizational situation, not just start-ups. Based on two years of extensive research, it embraces three principles that add up to a fundamentally new worldview of business and a new logic of decision making. First, rapid change and increasing uncertainty require leaders to be “ cognitively ambidextrous, ” able to shift between traditional “ prediction logic ” (choosing actions based on analysis) and “ creation logic ” (taking action despite considerable unknowns). Guiding this different way of thinking and acting is a new view of business, where simultaneous creation of social, environmental, and economic value is the order of the day. Finally, entrepreneurial leaders leverage their understanding of themselves and their social context to guide effective action. Each chapter offers concrete examples of how educators across all disciplines are integrating these ideas into their courses—and even their entire curricula. **The New Entrepreneurial Leader** lays out a comprehensive new paradigm for reinventing management education in order to mold leaders who will shape social and economic opportunity.
