Tamil Nadu, 1968. Village landlords rule over a feudal system that forces peasants to break their backs in the fields or suffer beatings as punishment. In the misery of their daily lives it is little wonder that the Communist Party begins to gain traction, a small spark of defiance spreading from villager to villager. As communities across the region begin to take a stand against the landlords, the landlords vow to break them; Party organizers suffer grisly deaths and the flow of food into the market-places dries up. But it only serves to make the villagers' resistance burn more fiercely. Finally, the landlords descend on one village to set an example to the others.

This volume addresses neuronal pain mechanisms at the peripheral, spinal and supraspinal level which are thought to significantly contribute to pain and which may be the basis for the development of new treatment principles. Chapters on nociceptive mechanisms in the peripheral nociceptive system address the concept of hyperalgesic priming, the role of voltage-gated sodium channels in different inflammatory and neuropathic pain states, the hyperalgesic effects of NGF in different tissues and in inflammatory and neuropathic pain states, and the contribution of proteinase activated receptors (PAR) to the development of pain in several chronic pain conditions. Chapters on nociceptive mechanisms in the spinal cord address the particular role of NO and of glial cell activation in the generation and maintenance of inflammatory and neuropathic pain and it discusses the potential role of local inhibitory interneurons, of the endogenous endocannabinoid system and the importance of non-neuronal immune mechanisms in opioid signaling in the control of pain. Furthermore, it is presented how spinal mechanisms contribute to the expression of peripheral inflammation.

With its life-threatening implications for both mothers and babies, pre-eclampsia continues to be one of the medical communities greatest challenges. The extremely variable clinical presentations reflect the complexity of the underlying pathology. Edited by renowned experts, *Pre-Eclampsia: Current Perspectives on Management* presents a comprehensive overview of the condition. Beginning with a historical review, the book covers current perspectives on the etiology of the condition including genetic aspects, the role of trophoblast invasion, the placenta, and the widespread endothelial cell activation which is a feature of the disease. The section on clinical presentation focuses on screening for pre-eclampsia, the varied presentations, and progression of the condition. The editors discuss the management of mild to moderate disease and on the labor ward management of severe, fulminated pre-eclampsia. They include chapters on the implication for anesthetists and for assessment of the fetus. The long-term complications of the disease for subsequent health of the pregnant women are reviewed and the text concludes with a section on further therapeutic strategies. The editors' approach, integrating reviews of both pathogenesis and management issues, makes the book a comprehensive, single-volume resource. Written by a multidisciplinary team, the book provides a multi-faceted update on the complex syndrome pre-eclampsia.

Distance Learning is for leaders, practitioners, and decision makers in the fields of distance learning, e-learning, telecommunications, and related areas. It is a professional journal with applicable information for those involved with providing instruction to all kinds of learners, of all ages, using telecommunications technologies of all types. Stories are written by practitioners for practitioners with the intent of providing usable information and ideas. Articles are accepted from authors--new and experienced--with interesting and important information about the effective practice of distance teaching and learning. Distance Learning is published quarterly. Each issue includes eight to ten articles and three to four columns, including the highly regarded "And Finally..." column covering recent important issues in the field and written by Distance Learning editor, Michael Simonson. Articles are written by practitioners from various countries and locations, nationally and internationally. Distance Learning is an official publication of the United States Distance Learning Association, and is co-sponsored by the Fischler School of Education at Nova Southeastern University and Information Age Publishing.

While there have been few theoretical contributions on the Markov Chain Monte Carlo (MCMC) methods in the past decade, current understanding and application of MCMC to the solution of inference problems has increased by leaps and bounds. Incorporating changes in theory and highlighting new applications, Markov Chain Monte Carlo: Stochastic Simulation for Bayesian Inference, Second Edition presents a concise, accessible, and comprehensive introduction to the methods of this valuable simulation technique. The second edition includes access to an internet site that provides the code, written in R and WinBUGS, used in many of the previously existing and new examples and exercises. More importantly, the self-explanatory nature of the codes will enable modification of the inputs to the codes and variation on many directions will be available for further exploration. Major changes from the previous edition: · More examples with discussion of computational details in chapters on Gibbs sampling and Metropolis-Hastings algorithms · Recent developments in MCMC, including reversible jump, slice sampling, bridge sampling, path sampling, multiple-try, and delayed rejection · Discussion of computation using both R and WinBUGS · Additional exercises and selected solutions within the text, with all data sets and software available for download from the Web · Sections on spatial models and model adequacy The self-contained text units make MCMC accessible to scientists in other disciplines as well as statisticians. The book will appeal to everyone working with MCMC techniques, especially research and graduate statisticians and biostatisticians, and scientists handling data and formulating models. The book has been substantially reinforced as a first reading of material on MCMC and, consequently, as a textbook for modern Bayesian computation and Bayesian inference courses.
